Project Name	Project – Industry specific intelligent Fire Management System
Maximum Marks	4 Marks

Solution Architecture:

Solution architecture is a complex process – with many sub-processes – that bridges the gap between business problems and technology solutions. Its goals are to:

- Find the best tech solution to solve existing business problems.
- Describe the structure, characteristics, behavior, and other aspects of the software to project stakeholders.
- Define features, development phases, and solution requirements.
- Provide specifications according to which the solution is defined, managed, and delivered.

MURAL TEMPLATE

Visualize the relationship between your application and Amazon Web Services

AWS Architecture Diagram
A template designed to help you build your AWS architecture

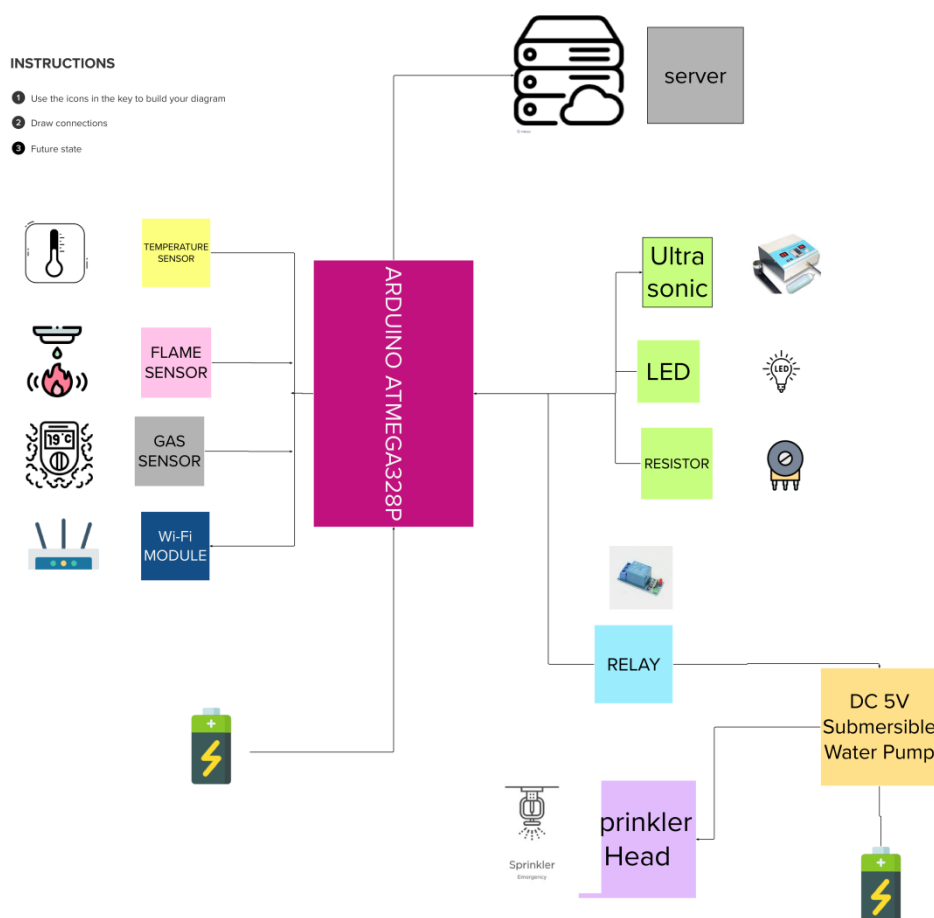

INTRODUCTION
Amazon Web Services (AWS) is a cloud-based infrastructure as a service (IaaS) platform using computer-aided design (CAD) to design, build, and scale their products. With our AWS architecture diagram template, you can visualize the relationship between your application and AWS.

This template contains 25 of the most commonly used AWS icons, ready for you to drag and drop into your diagram. You can download a full set of the AWS icons here, and add them to your mural.

TOOL TIPS
Create connections at the speed of thought:

- Hold **CTRL** and **SHIFT** to draw a connection.
- Turn on connector points to make your diagrams faster.
- Click on the connector points to instantly add new connections and drops.
- Change connector styles.
- Switch between different shapes and display modes quickly.
- Build with objects of the same type by holding down the **SHIFT** key.
